

HPC facilities at CSC

Juha Fagerholm

**7th Annual Workshop on Linux Clusters for Super
Computing, LCSC 2006**

Topics to be covered

- **Computer environment at CSC**
- **Supercomputer procurement**
- **Data storage procurement**
- **Nordic Grand Challenge Survey**

CSC's Servers 2006

Parallel supercomputers with distributed memory

IBM eServer Cluster 1600
ibmsc.csc.fi
16 nodes
512 processors
32-64 GB memory/node

HP DL145 cluster
sepeli.csc.fi
256 nodes
512 processors
(256 single core and 256 dual core)
4-8 GB memory/node

Parallel supercomputers with shared memory

Sun Fire 25K x 2
corona.csc.fi
48 + 48 processors (dual core)
192 + 192 GB memory

Servers

Sun V880
Scalar 1000
Robot
Archive server

Fujitsu Siemens
Prime Power 450
x 2
Disk server

Paracel
GeneMatcher2
gepardi.csc.fi
Sequence analysis server

IBM H70
laari.csc.fi
Database server

SGI Origin200
mbase.funet.fi
Media server

FTP Server
ftp.funet.fi
FTP Server

Library systems

Sun Fire 4800
(ARMAS)
Sun Fire 4800
(NELLJ)
Sun E10000
(LINNEA)
Sun V880
(DORIA)

Visualization

SGI Onyx2
tulip.csc.fi

Experimental Virtual Environment (EVE)

SGI Onyx2
InfiniteReality
8 processors
2 GB memory

Owned by Helsinki University of Technology and CSC

IBMSC – IBM eServer Cluster 1600

1971-2006

CSC
35 VUOTTA
35TH ANNIVERSARY

- **First phase installed 2000**
- **Theoretical peak performance 2.2 Tflop/s**
- **512 CPUs and 672 GB memory**
 - 16 IBM p690 nodes each configured with 32 Power4 CPUs (1.1 GHz) and 32-64 GB of memory
- **IBM HPS Switch (“Federation”)**
- **Customers with efficiently parallelized codes are given priority**

Sepeli – HP ProLiant DL145 Cluster

1971-2006

CSC

35 VUOTTA
35TH ANNIVERSARY

- **Installed 2005**
- **Part of M-grid (Material Science Grid in Finland)**
- **Theoretical peak performance 3.1 Tflop/s**
- **772 cores and 1.6 TB memory**
 - 128 nodes with two AMD Opterons @ 2.2 GHz
 - 128 nodes with two dual-core AMD Opterons @ 2.2 GHz
 - GE network
 - ROCKS Cluster Mgmt System
- **Profiled for serial and at first up to 8-way parallel workloads**

CSC's Top500 computers 1993–2007

Supercomputer procurement in 2006

- **Grant of 10 M€ from Ministry of Education**
- **Grant was split to address different needs: capacity & capability computing, storage**
- **Benchmark seminar for users in October 2005**
- **Call for participation was out in February 2006 and RFP in June 2006**
- **Agreements were signed on 9th October 2006**
- **First installation of HP cluster at 4Q/2006: 10 TF peak**
- **First phase of Cray Hood at 1Q/2007: 10 TF peak**
- **Second and third phases of Cray Hood at 1H/2008 and 2H/2008: 70 TF peak**
- **Project manager Janne Ignatius**

Benchmarks

- **Application benchmarks for supercomputers:**
 - DALTON
 - GROMACS
 - HIRLAM
 - POLAR (user code)
 - SU3_AHIGGS (user code)
 - VASP
- **Application benchmarks for clusters:**
 - GROMACS
 - HMMER
 - POROUS (user code)
 - SU3_AHIGGS (user code)
- **HPC Challenge benchmarks**
 - HPL
 - PTRANS
 - FFT
 - RR latency, bandwidth
 - etc.
- **IOZONE, b_eff_io**
- **Intel MPI Benchmarks**

Software use

- Large computational projects use mainly their own codes or other academic codes for research:
 - VASP, SIESTA, Elmfire, Finger, Finflo, Aplac, Elmer, Mika, ...
- 75% of the use of IBM SC is done with academic codes
- 25% of the use is done with commercial software
- The most popular application software on computational servers is (in CPUh):
 - Gromacs / molecular modeling
 - Gaussian03 / quantum chemistry
 - TURBOMOLE / quantum chemistry
 - BLAST / biosciences
 - POY / biosciences
 - Cerius2 / molecular modeling
 - FLUENT / computational fluid dynamics
 - ADF / quantum chemistry
 - NWChem / chemistry
 - Abaqus / structural analysis

Cray Hood (XT4)

- 10.6 TF -> 70 TF peak
(11 -> 18 cabinets)
- AMD Opteron Dual Core 2.6 GHz,
Quad Core
- 1 GB/core memory
- Cray SeaStar 2 interconnect (3D
torus)
- Unicos/lc (Linux, LWK Catamount
in compute nodes)
- Lustre filesystem, 74 TB
- PGI compilers

HP CP4000BL Proliant

- **10 TF peak performance**
- **2048 compute cores**
- **AMD Opteron Dual Core 2.6 GHz**
- **4 TB memory**
- **Infiniband interconnect**
- **RH EL 4 (Linux)**
- **HP XC cluster software**
- **100 TB file system (Lustre)**

1971-2006

Data storage policy

Data storage procurement

- **Schedule: decision in 2006**
- **Disk arrays, administration software and tools**
- **Possibility for petabyte capacity in 2010**

Perspectives for resource allocations at CSC

- **Demand for other resources than CPU hours:**
 - data storage (=mainly disk space)
 - application optimization, visualization
- **Demand for really large projects that have an important scientific goal**
- **Part of the capacity of CSC's Cray will be admitted based on the Nordic Grand Challenge Survey**

Nordic Computational Grand Challenge Survey

- **The four Nordic countries Denmark, Finland, Norway and Sweden are carrying out a survey to determine scientific problems that are of high interest to the research community in the Nordic countries and whose solution requires the availability of large-scale e-Infrastructure.**
- **This survey is part of a larger study that also addresses the current status of the largest computational projects and the (need for) resource sharing policies in the Nordic countries.**
- **The survey is commissioned by the Danish Agency for Science, Technology and Innovation, the Finnish IT center for Science, the Research Council of Norway, and the Swedish Research Council.**

Objectives of the survey

- **Aim: To find out the ongoing computational grand challenges or the ones emerging during the next 10 years in Nordic countries.**
 - National level**
 - To increase the visibility of computational science
 - Indications for needed resources; more balanced HPC infrastructure
 - **Nordic level**
 - synergistic effects for Nordic research
 - strengthen cooperation
 - efficient use of resources
 - Funding in the Nordic level (Nordforsk etc.)
 - mechanism for finding and putting through grand challenges
 - **EU level**
 - Funding and policy making (roadmaps etc.)
 - ESFRI, e-IRG...
 - **Global**
 - To increase the visibility of Nordic research in an European and global context
 - enable participation in international grand challenges

Criteria for grand challenges

- **International interest and relevance**
 - will increase the research profile of the Nordic region
- **Scientific problem that requires large scale (in Nordic level) HPC resources**
- **Long-term project**
- **Need for cooperation among research teams and communities**
- **Should consist of intermediate goals**
- **Widely recognized as a grand challenge**
- **Gives an answer for a fundamental scientific question.**
- **Industrial grand challenges will not be included in the survey, unless they come to light through academic world**

Conducting the survey

- **Scientific community is asked to submit grand challenge proposals**
 - Dealt with both locally and on the Nordic level.
 - Deadline for proposals 31.10.2006
 - Proposal www-page: www.notur.no/gcs
 - Project group:
 - Jacko Koster, UNINETT Sigma AS
 - Sinisa Krajnovic, SNIC
 - Kurt V. Mikkelsen, DCSC
 - Jura Tarus, CSC
- **A report with recommendations will be written and published (beginning of 2007)**

Summary

- **Finnish capacity will be competent again**
 - Cray Hood
 - HP cluster
 - disk array system
- **EU procurement hard to carry out**
 - Important to have users involved (benchmarks)
- **Resource allocations will change**
 - Nordic Grand Challenges Survey
 - data resources
