SUNET

What?

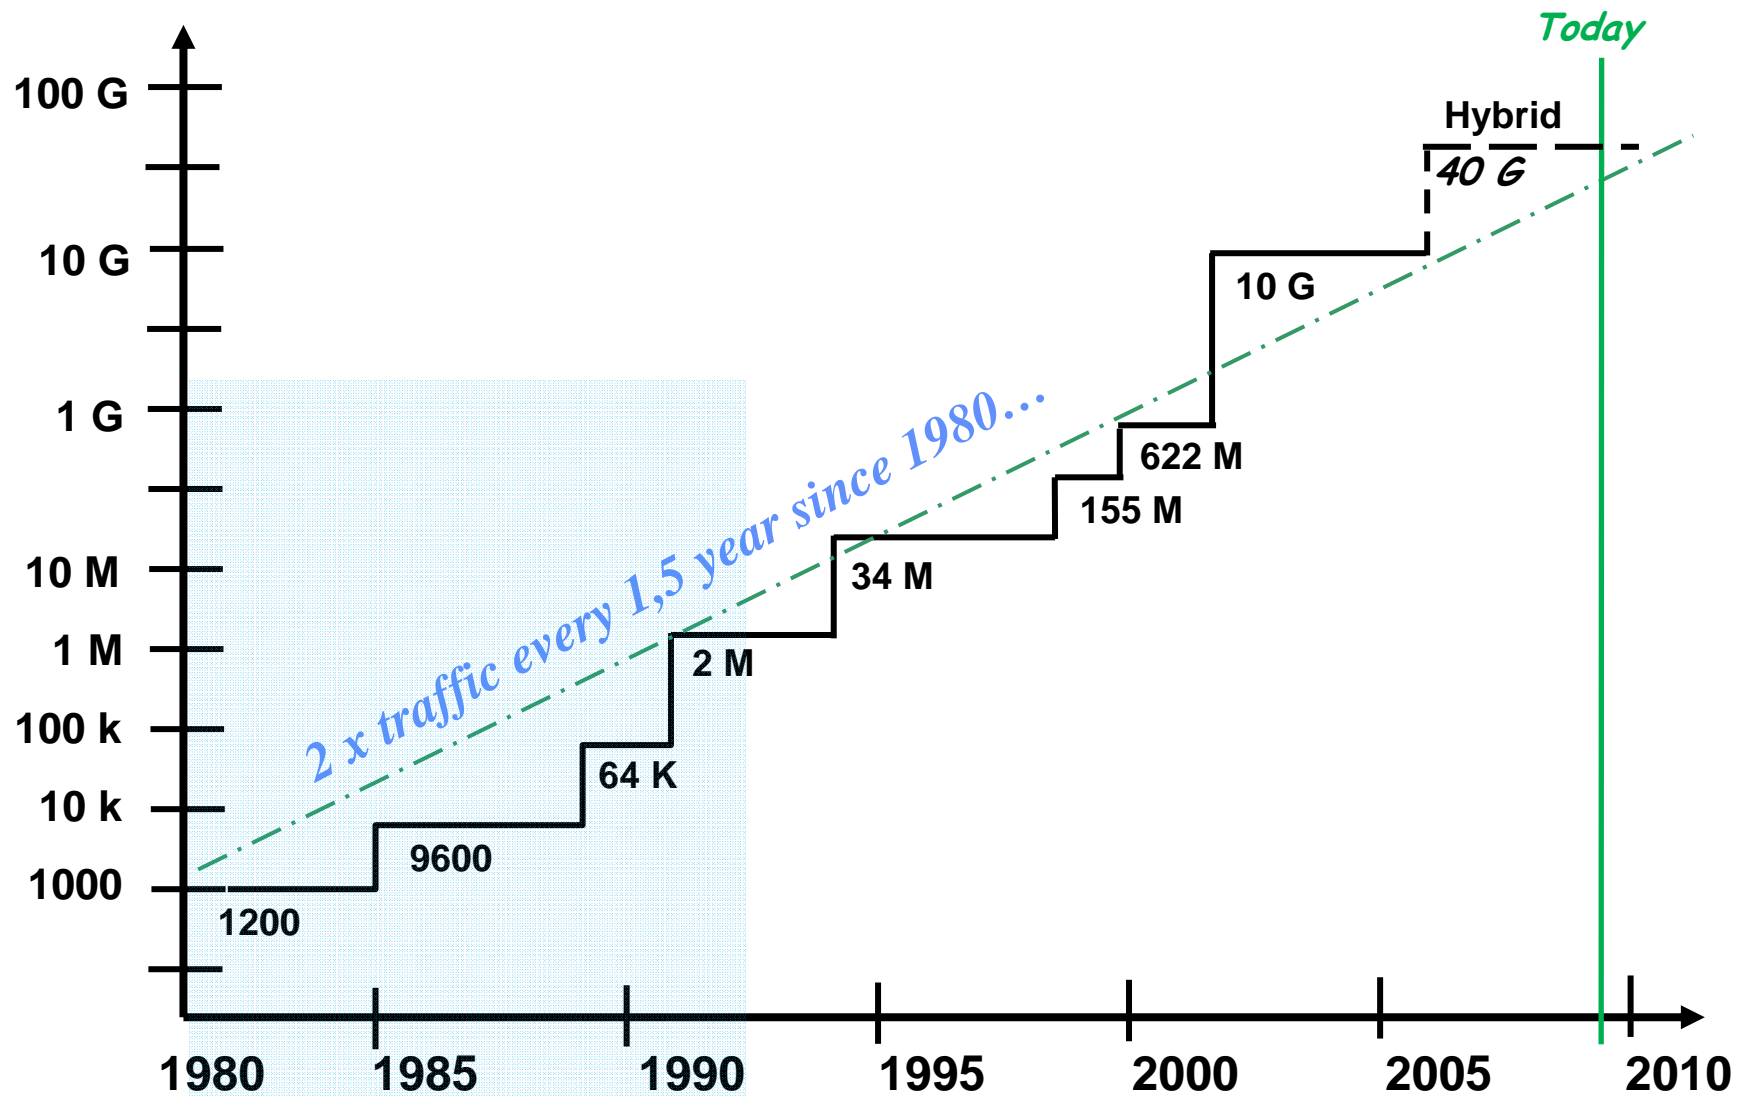

- Give Swedish universities access to national and international connectivity of high class
- Key factors are availability and capacity
- Should not be a bottleneck in the Universities communication with the rest of the world

Who?

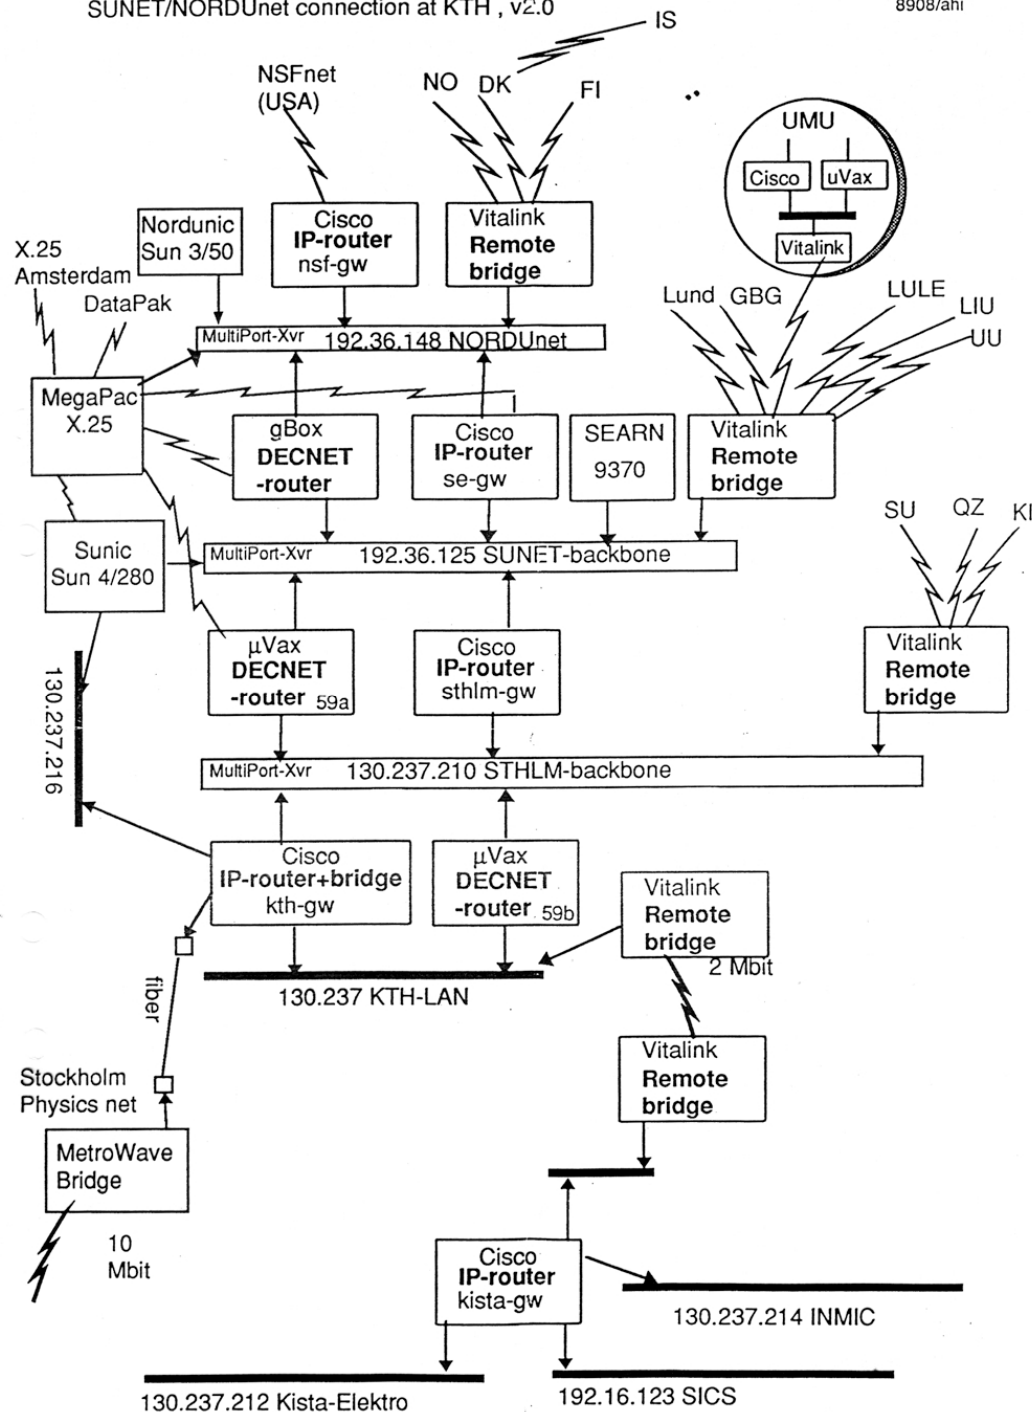

- **All universities (31), nationwide**
 - Used by “everybody”, such as: **HPC Centers, Researchers, Teachers, Students, Administrative personnel**
- Central govt. museums and art schools
- External organizations, with close relations to universities

SUNET core transmission capacity

1987-1992

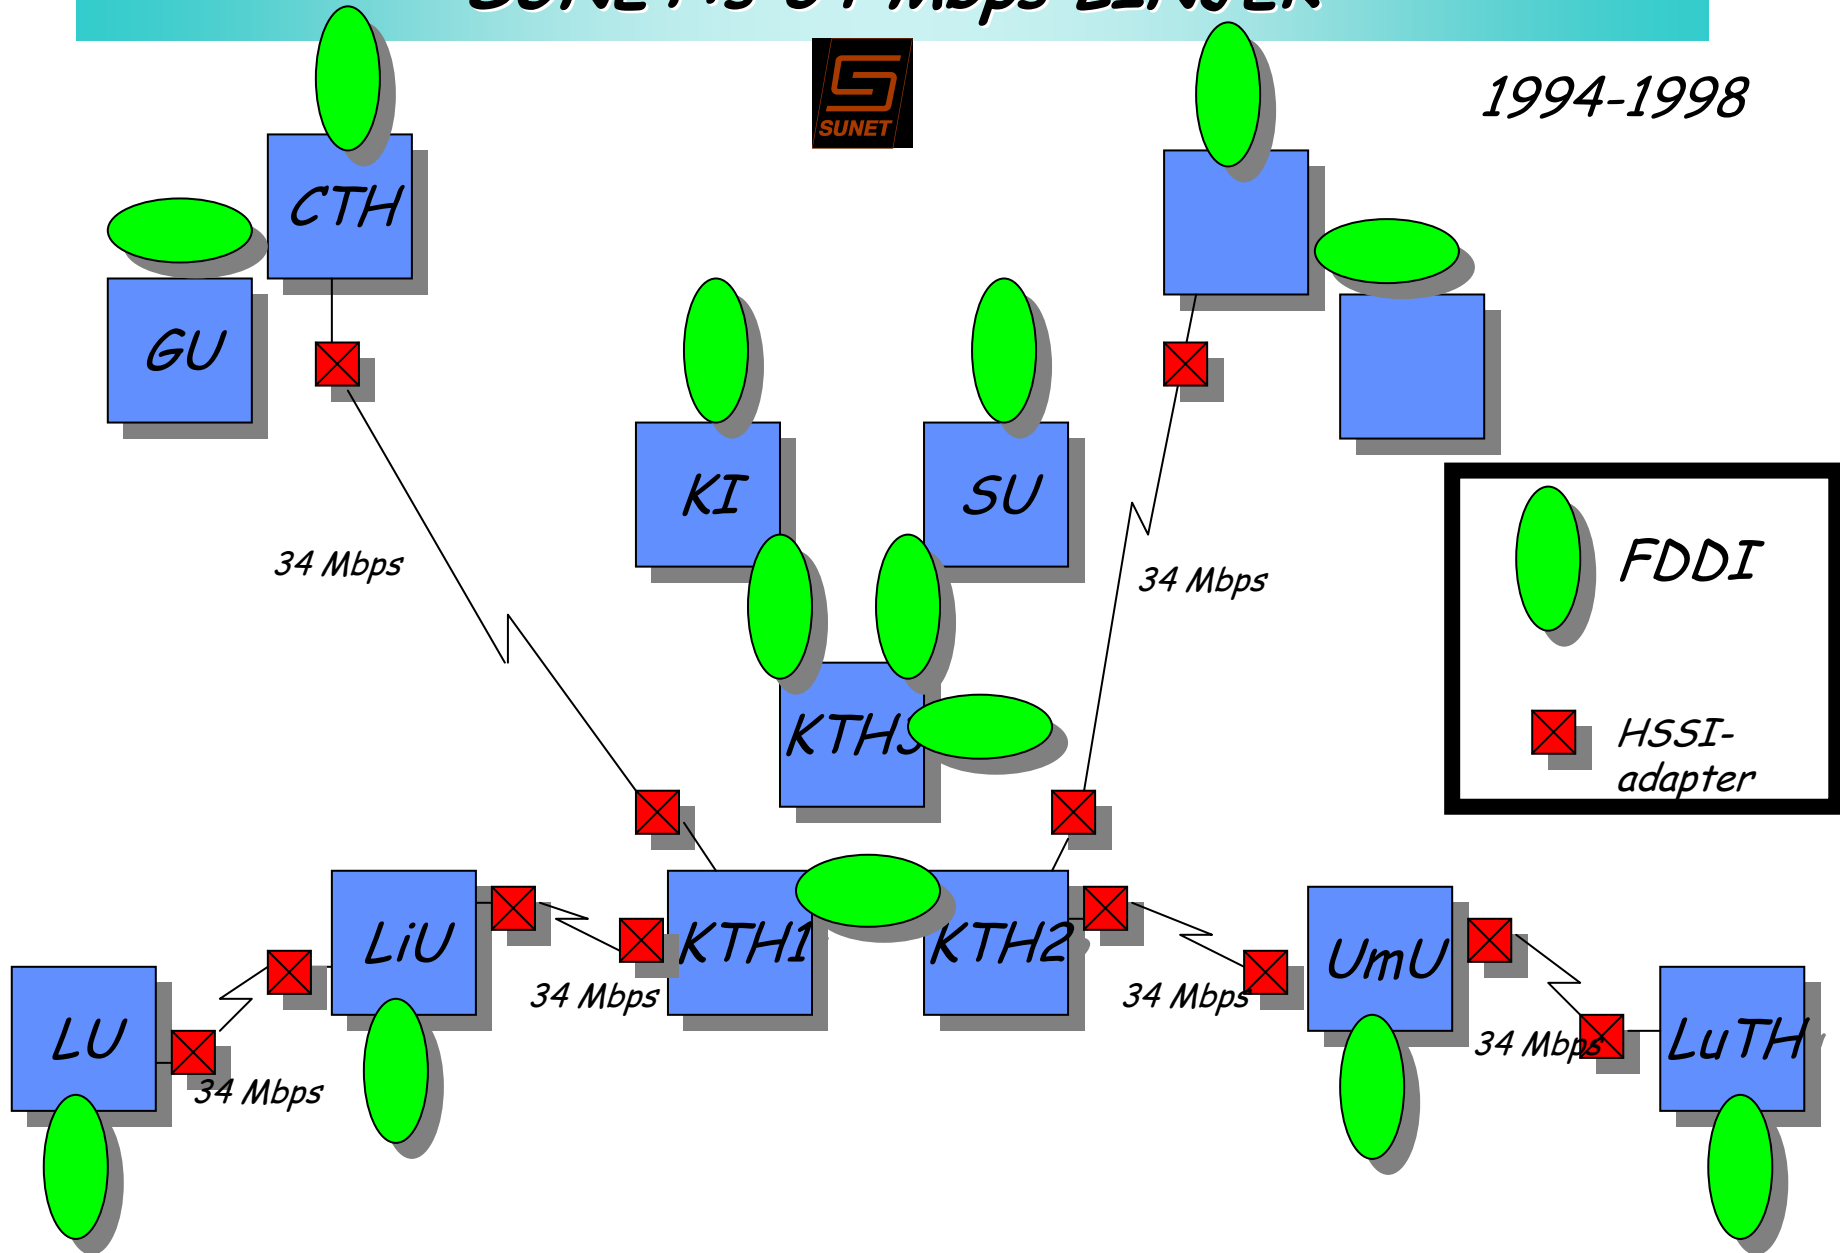

SUNET core transmission capacity

SUNET:s 34 Mbps LINJER

1994-1998

SUNET core transmission capacity

SUNET 155

1998 - 2002

SUNET core transmission capacity

GigaSunet

2002 - 2007

-  **Stamnät:**
10 Gbit/sek
-  **Lokalnät:**
2,5 Gbit/sek

SUNET core transmission capacity

The OptoSunet Network

A passive, transparent, optical network - that allows us to do changes/upgrades at the end points without changes to any component in the core “transport” network

Since April 2007

OptoSunet

- **3 systems**
 - North, West and South (7663 km fiber)
- **2 networks (80 channels) per system**
 - Red and Green
 - Redundancy on layer 3
- **Fully redundant network**
 - Red – Green separation
- **Support:**
 - Router connectivity
 - Dedicated high bw pt-pt connectivity
- **Cost efficient GE and 10GE**
 - But also 40G+ ready

Two components of OptoSunet

- **The routed IP network:**
 - Everyone at the Swedish universities
 - For the "traditional" day-to-day work
 - Connecting many-to-many
 - Millions of connections
- **The dedicated point-to-point connections:**
 - Researchers with special needs ("long" duration)
 - Radio Astronomers
 - High Energy Physicists
 - Life sciences
 - Grid Computing
 - Etc.
 - A "few" connections

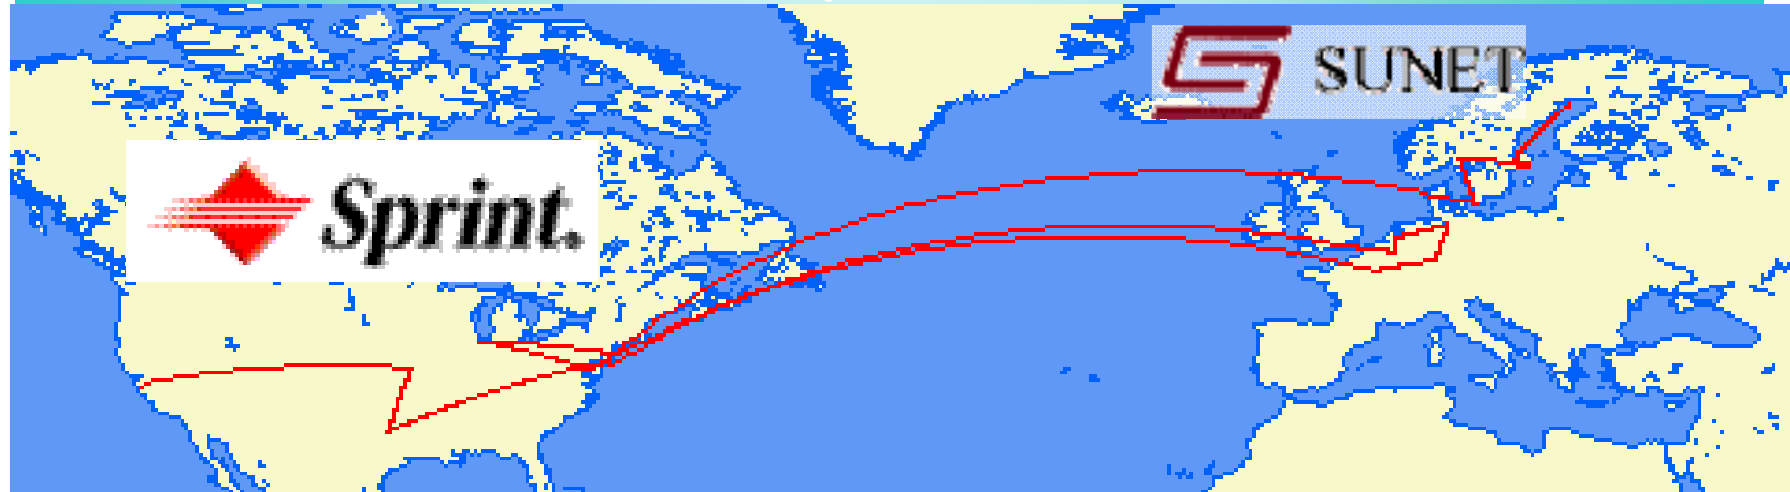

Some SUNET achievements during the past years

World record!

October 14, 2009 - #16

Internet Land speed record [2004]

- Distance (according to the LSR rules) from Luleå, Sweden to San Jose, CA is approx. 28 983 km (18 013 miles).
- 1 966 080 000 000 bytes in 3 648,81 sec = 4 311 Mbit/s.
- \approx 1 831 Gbyte (2 800 CDs) in an hour. Not a single bit error during this time, i.e. 15 728 640 000 000 bits (!) was transmitted correctly (not counting other traffic on the links).
- 42(!) router hops, 120 000 data packets per second.

... Recognized in the Guinness world book of records!

Internet2 Speed Record

On 14 April 2004 a team of engineers from Sprint Corporation in San Jose, California, USA, and the Swedish National Research and Education Network successfully transmitted 838.86 gigabytes of data over a distance of 16,343 km (10,155 miles) in 1,588 seconds. The resulting record value of 69,073 terabit metres-per-second was achieved over public networks using IPv4. The start and end points of the transmission were San Jose, California, USA, and the University of Luleå, Luleå, Sweden.

NEW

First long-haul 40 Gbit/sec in Europe [2007]

40 Gigabit per second, "Plug and Play" Circuit

40 Gbit/sec Luleå - New York [Nov 2008]

- 40 Gbit/sec Luleå-New York, ~9 600 km
- The world's longest 40 Gbit/sec connection
- First trans-Atlantic 40G
- Ciena gear on LLA-STO + MSQ-NYC

TeliaSonera

TAT-14

Summary of the exciting SUNET development

From modems, capacity and leased lambdas to:

- **Dark fiber**
- **Hybrid networking**
 - **Routed with 10 Gbit/s access**
 - **Point-to-point 40G, 10GE, 2.5G, GE**
- **Passive, Transparent Optical Network**
- **Fully Redundant**
- **40G ready**
- **Tunable Lasers**
- **Programmable ports**
- **Router Consolidation**
- **Reduced Cost**
- **Future Proof**
